Microorganisms are vital natural resources for biotechnology; they help advance human health, improve food security and provide innovative solutions to environmental and industrial challenges. The European microbial landscape is fragmented and resources or data are hard to find. The Microbial Resource Research Initiative (MRRI) is a pan-European effort to coordinate and integrate microbial resources across Europe. The MRRI aims to create a central hub for microbial resources, providing a one-stop shop for researchers and industry alike. The MRRI is a pan-European effort to coordinate and integrate microbial resources across Europe.
