Summary

The problem One in three people in the developing world suffer from hidden hunger, or micronutrient deficiency, due to a lack of information on proper nutrition. This is a major cause of illness, poor growth, reduced productivity and impaired cognitive development. To help combat the problem, CABI and its partners in

What we are doing Hidden hunger or micronutrient deficiency is a major cause of illness, stunting growth and cognitive development. To help combat the problem, CABI and its partners in the developing world have set up a consortium of private operators who will access

Results so far CABI is currently working with a consortium of private operators who will access the capabilities of the private sector to provide a range of products and services to

Donors The project is funded by the UK Department for International Development (DFID) and the Bill & Melinda Gates Foundation.

Partners The project is a consortium of private operators who will access the capabilities of the private sector to provide a range of products and services to
