Many of the alien pests and diseases of woody plants were unknown before they were established in new countries. No policy or measures to avoid their introduction and spread were therefore implemented. Recently, monitoring and early detection of new plant health threats has become a high priority. In this context, the sentinel plants in exporting countries has been proposed as a valuable tool to detect and prevent the introduction of new plant health threats. This project has been funded by the Swiss Federal Institute for Forest, Snow and Landscape Research (SLF) and Prof. Eric Allan of the University of Bern was also developed...
